## 参考 <a href="http://www.kancloud.cn/digest/lunaticssm/122063">http://www.kancloud.cn/digest/lunaticssm/122063</a> <a href="http://www.myexception.cn/eclipse/1927141.html">http://www.myexception.cn/eclipse/1927141.html</a>

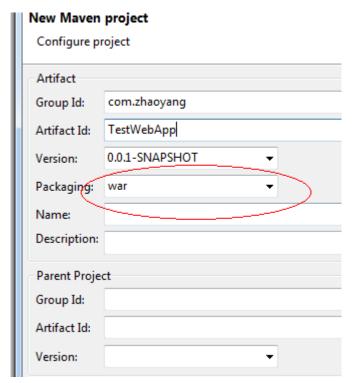

首先创建一个Maven的Project如下图

ı	<u>W</u> izards:
ш.	mav
ı	△ 🧁 Maven
п	🗐 Checkout Maven Projects from SCM
	Maven Module
п	Maven POM file
п	Maven Project

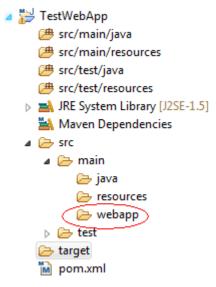

我们勾选上Create a simple project (不使用骨架)

New Mave	• •
Select proje	ect name and location
✓ Create a	simple project (skip archetype selection)
Use defa	ult <u>W</u> orkspace location
<u>L</u> ocation:	
🔳 <u>A</u> dd proj	ect(s) to working set
Wo <u>r</u> king s	et:
▶ Ad <u>v</u> ance	

这里的Packing 选择 war的形式

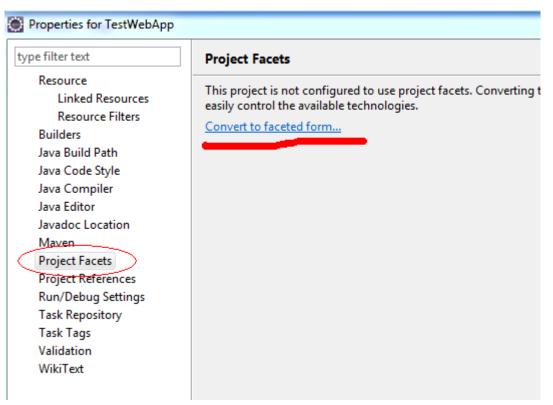

由于packing是war包,那么下面也就多出了webapp的目录

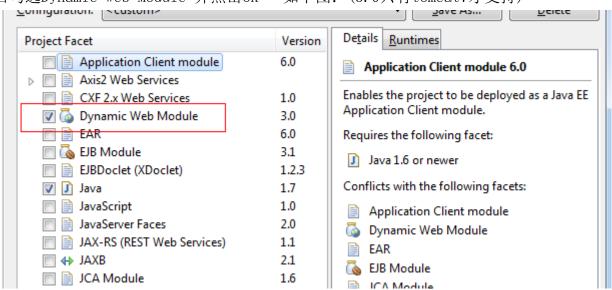

由于我们的项目要使用eclipse发布到tomcat下面,这里我们需要先把项目转成dynamic web project

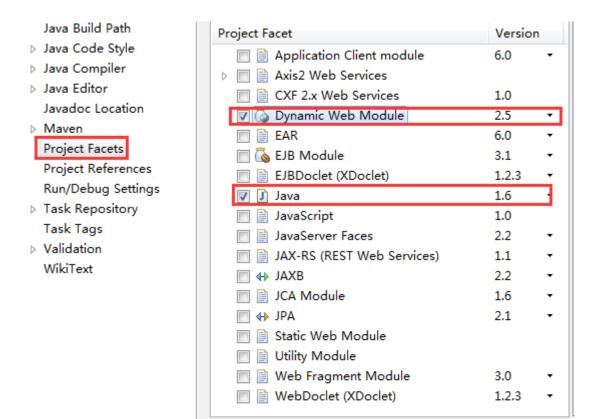

在我们的项目上点击右键,选择properties 并找到 Project Facets , 并点击Convert to faceted form… 如下图:

然后勾选Dynamic Web Module 并点击ok 如下图: (3.0只有tomcat7才支持)

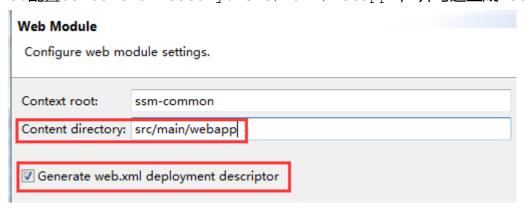

加载完成之后,选中Dynamic Web Module, 版本号选择2.5,如果使用的是Tomcat7和JDK7可以选择3.0,在点击Further configuration available...进行配置:

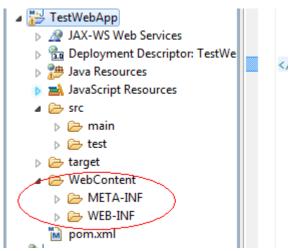

3.配置Content directory:"src/main/webapp", 并勾选生成web.xml的选项:

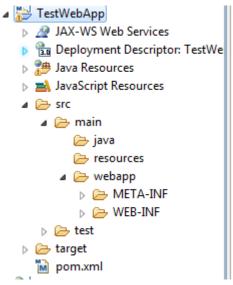

Further configuration available...

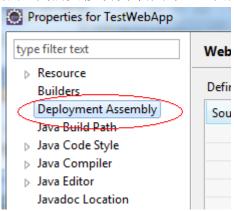

接下来观察我们的项目结构,多了一个web content目录

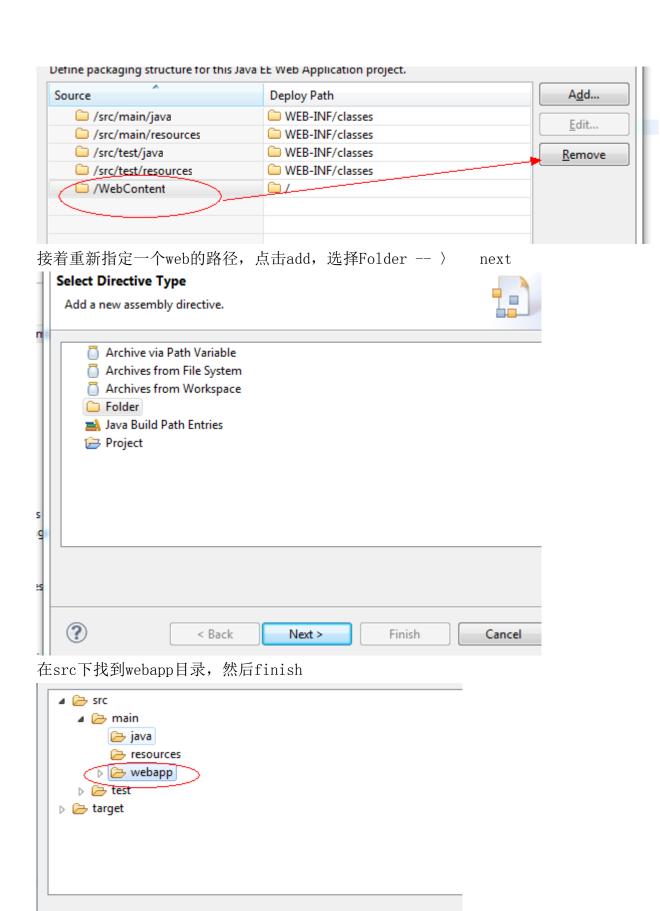

虽然此时我们可以发布到tomcat中,但这不符合maven的结构,我们还要做如下修改 把上图WebContent下面两个目录 META-INF ,WEB-INF 直接剪切到src/main/webapp目录 下,并删掉WebContent目录,那么现在的项目结构如下图:

然后我们要修改发布规则,右键点击项目, 选择 Deployment Assembly

选择WebContent,把它remove掉,测试类我们也不需要发布,test的两个目录页可以remove

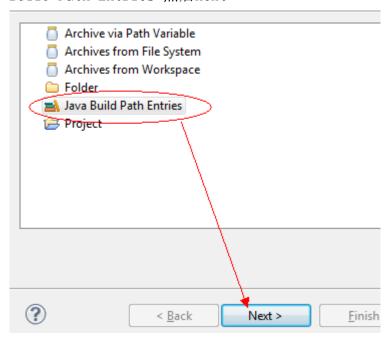

?

< <u>B</u>ack

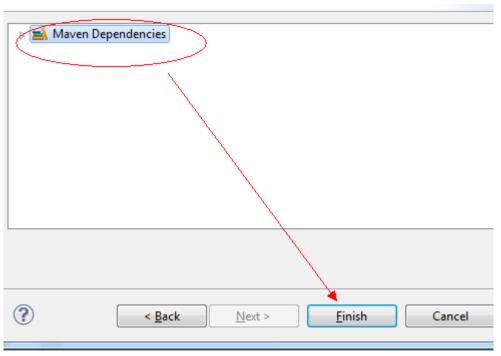

Next >

Finish

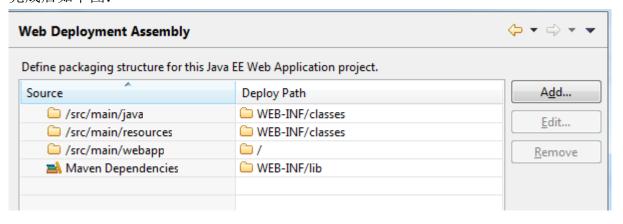

最后一步,我们要把当前的build path 指向 Maven Dependency, 直接点击add,选择Java Build Path Entries 然后next

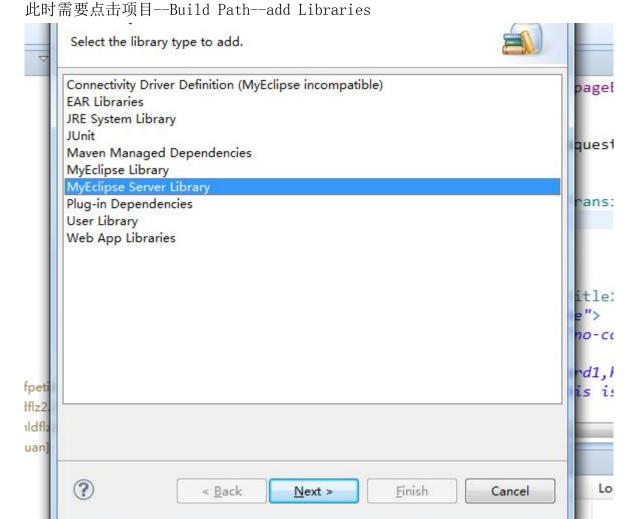

然后再点击finish完成

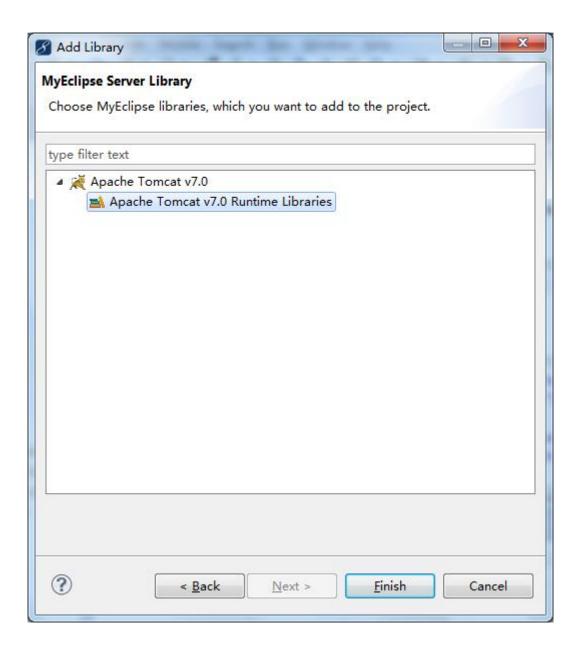

完成后如下图:

测试连接: <a href="http://localhost:8080/ActivitiDemo/index.jsp">http://localhost:8080/ActivitiDemo/index.jsp</a>
